

iCASH 15

Coin recycling system for POS stations

The **iCASH 15** is an enclosed coin recycling system that revolutionizes coin processing at the POS station.

Its **extraordinarily** compact dimensions enable the module to be easily and ergonomically integrated into your POS fixtures. The system can recycle up to eight different coins, which can be inserted and removed either by the POS operator or by the customer. Each inserted coin passes through a high-quality counterfeit detection process, and counterfeit coins and coins that are not recognized are ejected immediately. The closed cash cycle makes mistakes and pilfering or manipulation by store personnel impossible.

When the **POS account is balanced**, the coins can remain in the coin module, and the associated administration tasks can all be dispensed with. This enables till balancing or changes of POS personnel to be completed quickly: total coin amounts are available to the POS system or backoffice system at any time. Individually defined threshold values can trigger messages indicating which denominations need to be replenished or picked up. All coins added or removed are logged, leaving no scope for tampering. The module can be opened only by means of a special key, and the coins registered by the unit are also held in a separate part of the system that is accessible only with a separate key.

Wincor Nixdorf also offers its iCASH application for controlling the iCASH 15. This package includes business components for use at the POS system and in the cash office plus service modules for use in the event of a malfunction. Wincor Nixdorf's POS applications have been adapted to the iCASH application. The program can equally be used by third-party applications to facilitate easy integration of the iCASH 15.

The **coin recycling system iCASH 15** markedly reduces the administrative effort expended by commercial enterprises for coin handling at POS stations and in cash offices. Customers can easily get rid of all their small change at the POS without the checkout personnel needing to take hold of the coins, sort them into denominations and count them. When there is a change of POS personnel, or when all the POS systems are balanced at close of day, the

Coin recycling system for POS stations

corresponding coin totals are all available at the touch of a button. Using these coin recycling systems together with banknote recycling systems such as the iCASH 50 enables you to automate all the cash handling at your POS stations.

iCASH 50 and iCASH 15 systems can be integrated into Services Division's eServices platform using the iCASH Application Middleware package. This enables Wincor Nixdorf to assist its iCASH customers not only with system maintenance but also with operating and managing their entire store IT environment. The useful remote management functionality permits continual monitoring of static and dynamic system information by the Wincor Nixdorf Systems Management Center, whereby real-time monitoring of the current system states facilitates proactive management of operator and technician call-outs without the customer having to make any initial report, thus avoiding system failures due to impending problems.

TECHNICAL DATA

INPUT UNIT

■ Can accommodate up to ca. 50 coins

■ Coin capacities for euros

- 60x 2 €
- 70x 1 €
- 60x 50 Cent
- 80x 20 Cent
- 100x 10 Cent
- 100x 5 Cent
- 150x 2 Cent
- 150x 1 Cent

■ Processing speed

- Coin output: ca. 6 coins/s
- Coin input: ca. 3 coins/s

■ Currencies

- Euro
- English pound
- Swedish krona
- other currencies on request

■ DATA COMMUNICATION PORTS

- 1 x V.24
- 1 x USB

■ SOFTWARE REQUIREMENTS

- WIN XP
- WIN 2000
- Linux
- iCash Application

■ POWER SUPPLY CONNECTION

- 100 - 240 V, 50 - 60 Hz

■ DIMENSIONS (W x H x D in mm)

- 230 x 170 x 660

■ WEIGHT

- 24 kg (without coins)
- 28 kg (with coins)
