

iCASH 15E

Cash recycling system for the POS terminal

The **iCASH 15E** is a closed coin recycling system that automates coin processing at the POS.

Thanks to its compact dimensions, the module can be integrated in POS furniture at little effort and in compliance with ergonomic guidelines. The system is able to recycle up to 8 different coins. The coins can be inserted or removed either by the cashier or customer. Each coin that is inserted runs through a high-quality test procedure for forgeries. Counterfeit money and coins that are not recognized are returned immediately. The closed cash cycle ensures that incorrect change and manipulation by staff are impossible.

When the POS account is balanced, the coins can remain in the coin module, which means that any related administration tasks are superfluous. This enables till balancing or changes in cashier to be carried out quickly. Total coin amounts are available to the POS system or back-office system at all times. Individually definable thresholds can trigger messages, including an indicator that denominations need to be replenished or picked up. All coins added or removed are logged so that attempts at tampering are pointless. The device can be opened only with a special key, and the coins it registers are in turn stored in a separate part of the system that can be accessed only with a separate key.

A distinguishing feature of the iCASH 15E compared with the iCASH 15 is that it can accommodate more than three times the number of all denominations of coin. The iCASH 15E is recommended in particular where large volumes of coins are handled and there is a clear imbalance between the quantities deposited and dispensed. The iCASH 15E can be ordered with an optional refill cassette, with the result that

administrative employees no longer come into contact with coins when the system is replenished.

iCASH 15E

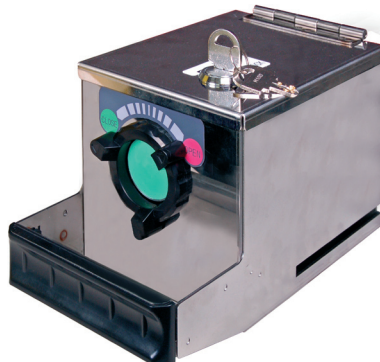

Cash recycling system for the POS terminal

Wincor Nixdorf offers the iCASH Manager for controlling the iCASH 15E. This software includes business components for use at the POS system and in the cash office, plus service modules for use in the event of a malfunction. Wincor Nixdorf's POS applications have been adapted as standard to this software. It can equally be used by third-party applications to enable quick and easy integration of the iCASH 15E.

The coin recycling system iCASH 15E slashes the administrative overhead of retailers when it comes to coin handling at POS terminals and in cash offices. Customers can easily get rid of all their small change at the POS without the cashier needing to handle coins, sort them into denominations, or count them. When there is a change in cashier or when all the POS systems are balanced at close of day, all the coin totals are available at the touch of a button. If this coin recycling system is used together with banknote recycling systems such as the iCASH 10, all cash handling operations at the POS can be automated.

All iCASH systems can be integrated in the Services Division's eServices Platform using the iCASH Manager

middleware. This enables Wincor Nixdorf to assist its iCASH customers not only in system maintenance but also in operating and managing their entire store IT environments. The remote management functionality that has been developed permits permanent monitoring of static and dynamic system information by the Wincor Nixdorf Systems Management Center. Real-time monitoring of the current system states enables proactive management of operator and technician call-outs without requiring that the customer make the initial report of a problem, thus avoiding system failures due to impending problems.

TECHNICAL DATA

INPUT UNIT

- Bulk up to approx. 50 coins
- Euro coin capacities

- 220 x 2 Euro
- 250 x 1 Euro
- 220 x 50 Cent
- 290 x 20 Cent
- 360 x 10 Cent
- 360 x 5 Cent
- 540 x 2 Cent
- 540 x 1 Cent

- Processing speed

- Coin output:
Approx. 6 coins/sec.
- Coin acceptance:
Approx. 3 coins/sec.

- Currencies

- Euro
- Pound sterling
- Swedish krona
- Other currencies on request

DATA COMMUNICATION PORTS

- 1 x V.24

SOFTWARE REQUIREMENTS

- WIN XP
- WIN 2000
- Linux
- iCash Manager

POWER SUPPLY CONNECTION

- 100 - 240 V, 50 - 60 Hz

DIMENSIONS (W x H x D in mm)

- 300 x 240 x 652

WEIGHT

- 35 kg (without coins)
- 47 kg (with coins)
